

ABOUBAKR IBRAHIM

Biomedical Engineer | Medical Device Quality | ISO 13485 | QMS & Internal Auditing

Istanbul, Türkiye • +90 552 533 7031 • abubakrhse.ah@gmail.com • linkedin.com/in/aboutakr-ibrahim-45435a246

Open to global relocation within one week • Quality, QA, QMS and compliance opportunities

PROFESSIONAL SUMMARY

Biomedical Engineer combining supervised medical-equipment experience with focused training in ISO 13485:2016, medical-device quality management, internal auditing, electrical safety and technical documentation. Supported functional verification, equipment-status tracking, recalibration activities, fault investigation and maintenance records in hospital and X-ray technical-service environments. Prepared to contribute in an entry-level Medical Device Quality, QA, QMS, Compliance, Document Control or Validation-support role with a strong focus on traceability, risk awareness and patient safety.

QUALITY & TECHNICAL CAPABILITIES

QMS & Standards	ISO 13485:2016; medical-device quality management; internal-audit principles; process and risk awareness
QA & Verification	Functional verification; inspection support; recalibration activities; equipment readiness; electrical-safety awareness
Documentation	Service records; equipment-status tracking; maintenance observations; traceability; spare-parts and warehouse documentation
Technical Context	Critical-care equipment; imaging and X-ray systems; MATLAB; healthcare data; FHIR fundamentals

PROFESSIONAL EXPERIENCE

Biomedical Engineering Intern — Clinical Engineering Department Aug-Sep 2023
Cairo University Hospitals | Cairo, Egypt

- Completed a 24-day hospital-based internship supporting biomedical engineering activities across ICU, CCU, emergency, operating-room and imaging departments, with attention to equipment readiness and patient safety.
- Supported inspection, functional checking and maintenance documentation for ventilators, defibrillators, anesthesia equipment, patient monitors, operating tables, ultrasound systems and dental equipment.
- Observed structured CT fault investigation involving gantry operation, X-ray-tube and power checks, ventilation-fan replacement and post-service functional verification.
- Participated in GE CARESCAPE R860 fault investigation involving airflow and pressure sensors, and supported condition assessment of ultrasound probes and operating-table batteries.
- Documented technical observations from equipment installation, clinical training and maintenance activities, including a defibrillator communication module and SINO SN-1800V infusion pumps.

Biomedical Engineering Intern — X-Ray & Radiology Systems Sep-Oct 2022
EKOL Tıbbi Ürünler A.Ş. | Istanbul, Türkiye

- Completed a 20-day internship focused on X-ray and digital-radiography equipment, radiation principles, service workflows and equipment-status documentation.
- Supported engineers during hospital service visits involving TOPAZ mobile X-ray and GXR U-arm systems, observing controlled inspection and verification steps.
- Supported traceable fault investigation involving movement and safety-brake sensors, X-ray-tube fuses, control boards, motors and mechanical positioning systems.
- Participated in functional verification, recalibration, component replacement and equipment reassembly under engineering supervision.
- Supported service documentation, spare-parts review, warehouse activities and equipment-status tracking—experience directly relevant to quality records and traceability.

SELECTED QUALITY-RELEVANT PROJECT

Early Sepsis Detection in ICU Patients Using Machine Learning

Mar–Jul 2025

Işık University | Istanbul, Türkiye

- Developed a MATLAB-based risk-screening prototype using de-identified MIMIC-III ICU data and documented the data-preparation and model-comparison workflow.
- Examined clinical-variable consistency, class imbalance and model outputs while comparing Logistic Regression, Random Forest and deep-learning approaches.
- Evaluated performance using accuracy, precision, recall, F1-score and confusion matrices; identified the need for stronger traceability and leakage-safe validation before any clinical interpretation.
- Connected data quality, validation and risk communication with the wider objective of safe clinical decision support.

EDUCATION

Bachelor of Science in Biomedical Engineering — English Program

2019–2025

Işık University | Istanbul, Türkiye

Graduated: 30 September 2025

SELECTED CERTIFICATIONS & TRAINING

- ISO 13485:2016 Medical Device QMS — Internal Auditor | Işık University
- Medical Device Quality Assurance: Ventilators, Patient Monitors, Neonatal Equipment and Electrical Safety | Fluke Biomedical, 2026
- ESA609 Electrical Safety Analyzer and Impulse 7000 Defibrillator Analyzer Training | Fluke Biomedical, 2026
- Medical Device Quality Management and Auditing Basics | Scilife Academy, 2026
- HEARTS Technical Package for Clinicians and Programme Managers | World Health Organization, 2026
- McKinsey.org Forward Program — Problem Solving, Communication and Adaptability | McKinsey.org, 2025
- Healthcare Data, Azure Health Data Services and FHIR Fundamentals | Microsoft Learn, 2026
