

FEYZİYE SCHOOLS FOUNDATION

IŞIK UNIVERSITY

**FACULTY OF ENGINEERING AND
NATURAL SCIENCES**

I am pleased to write this recommendation letter for Aboubakr Hussein Mohamed Kamal Ibrahim, a graduate of the Department of Biomedical Engineering at Işık University. During his undergraduate studies, Aboubakr demonstrated a strong passion for scientific research and technical innovation. His enthusiasm for applying data-driven methods to solve healthcare problems was particularly evident during his graduation project.

His project, titled "Machine Learning Modelling of Critical Care Patients in the Intensive Care Units for Early Detection of Sepsis," was an outstanding example of how engineering and artificial intelligence can contribute to clinical decision-making. Aboubakr was responsible for collecting, processing, and analyzing clinical data, implementing machine learning algorithms, and evaluating model performance using appropriate metrics. His approach showed both technical depth and an understanding of the medical implications of his findings.

Aboubakr's ability to work independently, think critically, and interpret data accurately reflects a strong potential for research-oriented studies. He also demonstrated excellent documentation and presentation skills when explaining his project results, showing clarity and professionalism. I believe that with his background, curiosity, and technical foundation, Aboubakr will make valuable contributions to any master's program focused on engineering, data science, or health technology.

I fully recommend him as a promising candidate for graduate study, confident that he will continue to develop as a skilled and responsible researcher.
